

BTE Work Simulator

North Valley Orthopaedic Hand Therapy, 370 Del Norte
#202, Yuba City, CA 95991, (530) 671-2650

North Valley Orthopaedic Hand Therapy is proud to have a Work Simulator II. Susan Williams, OTR/L, CHT and Andrea Hankins, CES, have over 18 years experience in patient rehabilitation and functional capacity evaluation utilizing BTE technology.

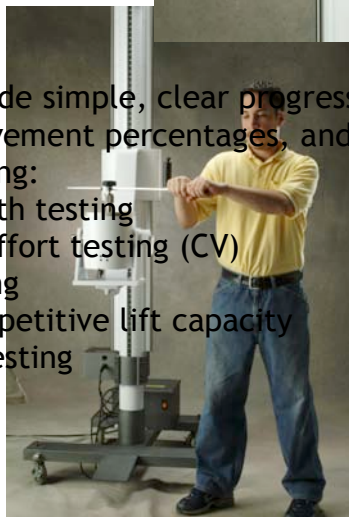

- Help your patients get back to work, home, or sports activities quickly by duplicating the movements and stresses of real-life tasks.
- Perform FCEs, strength profiles, or a simple readiness for work evaluation on a few job-specific tasks.
- Help identify and measure impairments by duplicating the specific motions which affect an injury and reproducing the reported symptoms.

Automatic graphs provide simple, clear progress information and improvement percentages, and can include the following:

- Maximum strength testing
- Consistency of effort testing (CV)
- Endurance testing
- Maximum and repetitive lift capacity
- Work capacity testing
- FCE components

“Based on over 20 years of clinical experience and continuous development, the BTE Simulator II is the most proven and widely recognized system for functional rehabilitation.”
